How To Power On Transmitter

How to turn everything on in the proper order pre-flight

Written By: Adam Bell

INTRODUCTION

It is important that you turn everything in on and off in the correct order to prevent injury. If the engine accidentally turned on you may damage your plane/heli and you may also get hurt.

Step 1 — How To Power On Transmitter

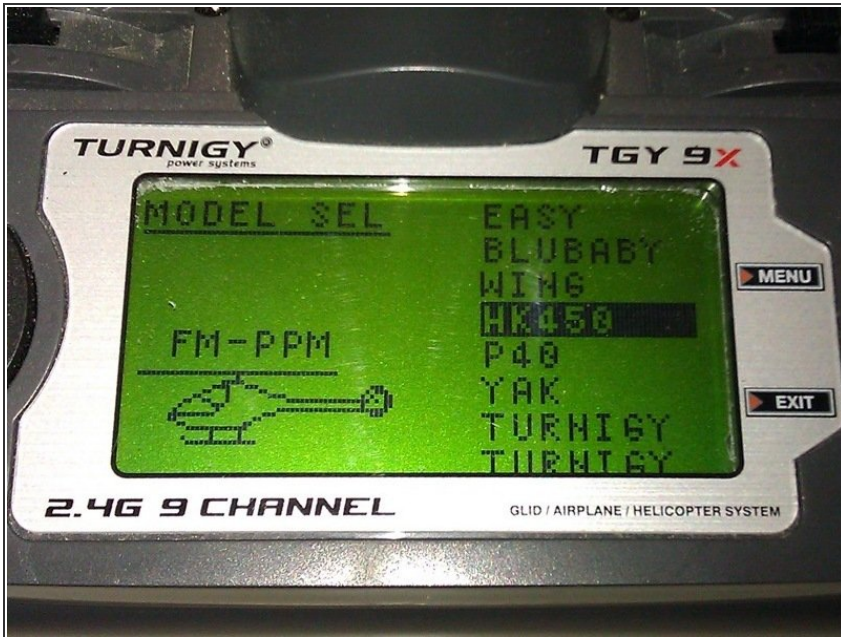

- Put throttle stick in idle position

Step 2

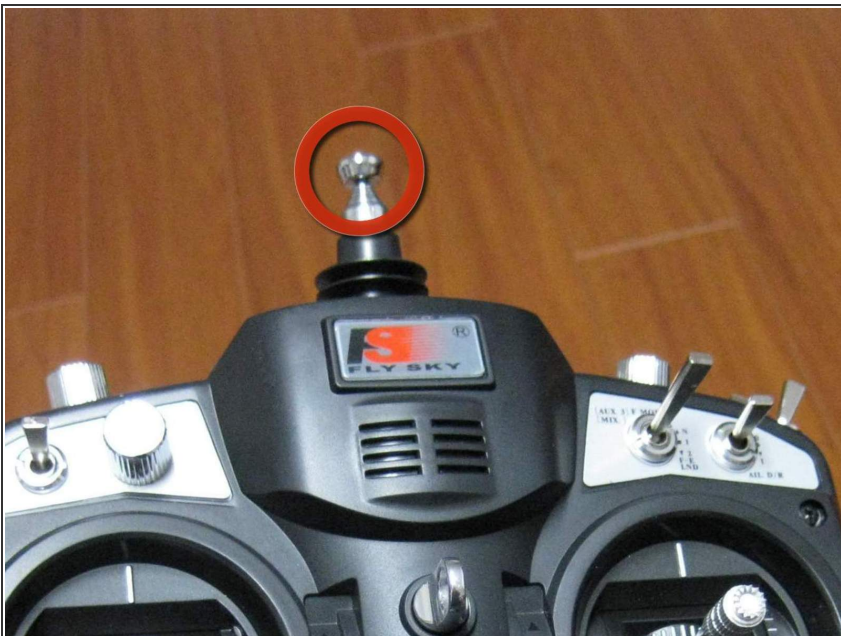

- Turn on transmitter and wait for home screen to appear

Step 3

- Select the correct model from model memory

Step 4

- Extend the antenna

Step 5

- Turn on the power on the receiver

Step 6

- Test all controls to see if servos are functioning

Step 7

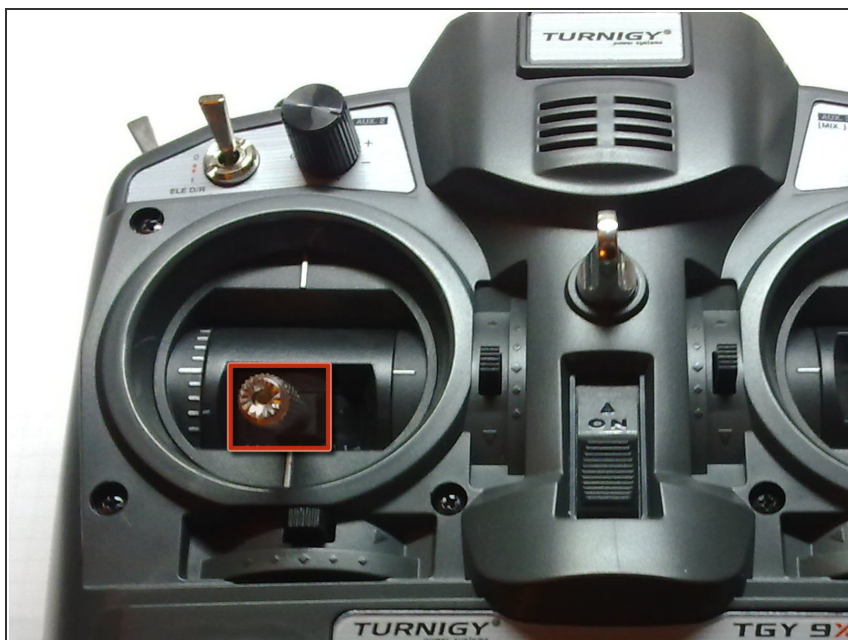

- Start engine
- perform range check

Step 8

- Fly!

Step 9

- After flight, bring throttle back to idle

Step 10

- Turn off receiver and then turn off transmitter
